RULES AND REGULATIONS FOR CARRY- ING OUT PLANT QUARANTINE ACT

Regulation 1—Short Title of the Act

The act "To regulate the importation of nursery stock and other plants and plant products; to enable the Secretary of Agriculture to establish and maintain quarantine districts for plant diseases and insect pests; to permit and regulate the movement of fruits, plants and vegetables therefrom, and for other purposes," approved August 20, 1913, shall be known and referred to as "The Plant Quarantine Act."

Regulations 2—Definitions

For the purpose of this act the term "nursery stock" includes all field-grown florists' stock, trees, shrubs, vines, cuttings, grafts, scions, buds, fruit pits and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation, except field, vegetable, and flower seeds, bedding plants, and other herbaceous plants, bulbs, and roots.

The following classes of plants are included in nursery stock as defined above: Fruit trees, fruit-tree stocks, nut trees, grapevines, bush fruits, roses, rose stocks, forest and ornamental trees and shrubs (both deciduous and evergreen), field-grown florists' stock, cuttings, scions, or seedlings, fruit pits and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation not otherwise listed, except as noted above.

All woody plants and parts thereof for propagation or planting are included within the term "nursery stock" as used in this act.

"Field-grown florists' stock" is all florists' stock which is usually grown outside of greenhouses for all or part of the year.

"Herbaceous plants" are plants which perish annually down to (sometimes including) the root; that is, soft, succulent plants.

Regulation 3—Applications for Permits for Importation of Nursery Stock

Persons contemplating the importation to

YEAR BOOK

the Federal Horticultural Board for a permit stating in the application the name and address of the exporter, the country and locality where grown, the port of entry, and the name and address of the importer in the United States to whom the permit should be sent.

Applications for permits should be made in advance of the shipment of the nursery stock, but if, through no fault of the importer, stock should arrive before the issue of a permit the stock will be held in customs custody at the risk and expense of the importer for a period not exceeding 20 days pending the issue of a permit.

Applications may be made by telegraph, in which case the information required above must be given.

The port of entry is the port where the stock is cleared from customs and the duty paid, and is therefore not necessarily the port of arrival.

Seeds and plants not included in "nursery stock," as defined in regulation 2 and not under specific quarantine, may be imported without permit or compliance with other provisions of the plant quarantine act.

Permits are not required for nursery stock entering the United States for immediate transportation in bond to foreign countries.

Permits for nursery stock entering the United States for immediate transportation to interior points in bond are required only at port of entry.

Two forms of application are provided: (1) for importation of nursery stock from countries which maintain nursery stock inspection in accordance with regulations 6 and 7; and (2) for importation from countries which do not maintain nursery stock inspection in accordance with regulations 6 and 7.

No statement of quantity to be imported need be made in the application.

Except as to pines, a statement as to the nature of nursery stock to be imported is

AMERICAN NURSERY

not required in the application; but full information must be given in the notices required by Regulation 8.

In the case of pines the scientific names must be given in the application. The importation of all five-leaved pines is strictly prohibited from each and every country of Europe and Asia. (See Quarantine No. 7, May 21, 1913.

Regulation 4—Delivery in Bond

If the required permit be not at hand at the time of the arrival at port of entry of the nursery stock, such stock may be delivered to the importer, consignee or agent for the proper care thereof upon the filing of a voluntary bond with approved sureties in double the invoice value of the property (the amount of the bond in no case to be less than \$20), conditioned upon the redelivery thereof to the collector within 20 days from the date of arrival, and providing that the same shall not be removed from the port of entry within such period or until the presentation of the proper permit; or, if the importer, consignee, or agent shall so select, the goods may be retained in customs custody pending the issuance of the permit, wholly at the risk and expense of the importer.

Regulation 5—Permits for Entry of Nursery Stock

On approval by the Secretary of Agriculture of an application for the importation of nursery stock from countries which maintain nursery stock inspection a permit will be issued in triplicate. One copy of the permit will be furnished to the applicant, to be retained by him for presentation, on the arrival of the imported stock, to the customs officer at the port of entry named in the permit; one copy will be mailed to the collector at the port of entry; and the third filed with the application. The beginning of the period for which a permit will be valid will be expressed in the permit. All permits will expire on the 30th day of June next after they become valid.

Permits may be canceled and further per-

YEAR BOOK

mits refused, for the importation of the products of any grower or exporter who has knowingly shipped into the United States any nursery stock, or other plants or plant products, the importation of which is forbidden by the Secretary of Agriculture under the authority conferred by section 7 of the plant quarantine act.

Regulation 6—Entry of Nursery Stock

Entry of nursery stock from countries which maintain nursery stock inspection will not be allowed unless the invoice is accompanied by an original certificate, and unless each container bears a copy certificate, issued by a duly authorized official of the country from which it is exported, stating that the nursery stock covered by the certificate has been thoroughly inspected by him or under his direction and found or is believed to be, free from injurious plant diseases and insect pests. Nursery stock exported between October 1 and May 31 shall be inspected on or about the 1st of October, and stock exported between June 1 and September 30 shall be inspected at the time of packing.

Nursery stock from countries which do not maintain stock inspection will be admitted into the United States only for experimental purposes and in limited quantities under special permit through ports designated therein. (See regulation 5.) Such nursery stock shall not be delivered to the importer or consignee until it has been examined by an inspector of the Department of Agriculture and found to be free from plant disease and insect pest: Provided, however, that nursery stock which, in the judgment of the Federal Horticultural Board, can be cleaned by disinfection or other treatment may be delivered to the importer, consignee, or agent for the proper care and treatment thereof upon the filing of a voluntary bond, with approved sureties in double the invoice value of the property (the amount of the bond in no case to be less than \$20 nor less than \$1 per plant in case of date palms and date-palm offshoots), conditioned upon the redelivery thereof to

AMERICAN NURSERY

the collector of customs within 40 days from date of arrival, and providing that the same shall not be removed from the port of entry until a written notice is given to the collector of customs by the inspector of the Department of Agriculture that the nursery stock in question has been properly treated. Nursery stock inspected, as provided herein, which is found to be carrying any plant disease or insect pest, and which, in the judgment of the Federal Horticultural Board, can not be cleaned by disinfection or treatment, shall be refused entry. All charges for storage, cartage, and labor incident to inspection, other than the services of inspectors, shall be paid by the importers.

If a package of nursery stock offered for entry includes any prohibited article, the entire package will be refused entry.

Each case, box, or other container of covering of nursery stock offered for entry shall be plainly and correctly marked to show the number of permit, the general nature and quantity of the contents, the district or locality and country where grown, the name and address of the exporter, and the name and address of the consignee.

Regulation 7—Foreign Certificate of Inspection

Each certificate and copy certificate shall give the date of inspection; name of the grower or exporter; the district or locality and the country where grown; a statement that the stock has been inspected by a duly authorized official and found, or believed to be free from insect pests and plant diseases. The original certificate shall be signed and sealed by, and the copy certificate shall bear the seal of, the responsible inspection official for the country of origin.

Lists of officials in foreign countries authorized to inspect nursery stock, giving their names and official designations, will be furnished to collectors of customs through the Secretary of the Treasury.

Regulation 8—Notice of Shipment by Permittee

Immediately upon the entry and before removal from port of entry of nursery stock,

YEAR BOOK

for each separate shipment or consignment thereof, the permittee shall notify the Secretary of Agriculture through the collector of customs where entry is made on forms provided for that purpose, stating the number of permit, the general nature and quality of the nursery stock, the country and locality where grown, the date of entry and the name and address of the consignee to whom it is proposed to forward the nursery stock, together with the probable date of delivery for transportation.

At the same time a copy of the notice to the Secretary of Agriculture shall be sent by the permittee to the duly authorized inspector or other officer of the State, Territory, or District to which the nursery stock is to be shipped. Lists of such inspectors and officers may be obtained on application to the collector of customs or the Federal Horticultural Board, Washington, D. C.

Permits may be canceled and further permits refused if a permittee fails to give either of said notices, or give a false notice, or knowingly mislabel any nursery stock with intent to evade any provision of the plant quarantine act or of any regulation thereunder.

Should a consignee named in such a notice ship or deliver for shipment to any other State, Territory, or District such nursery stock before it has been inspected by a duly authorized State, Territorial, or District inspector or officer, he shall prior to such shipment give like notice to the Secretary of Agriculture and to the duly authorized inspector or other officer of the State, Territory or District to which the nursery stock is to be reshipped.

Imported nursery stock which has been once inspected will be allowed to move interstate without restrictions other than those imposed on the interstate movement of domestic nursery stock.

Regulation 9—Hearings

When the Secretary of Agriculture contemplates the restriction of the importation of plants and plant products not included

AMERICAN NURSERY

within the term "nursery stock" as used in the plant quarantine act, or the prohibition of the importation of nursery stock and other plants and plant products from any foreign country, or the prohibition of restriction of the shipment of nursery stock and other plants and plant products from one State, Territory, or District of the United States to another State, Territory, or District, he will give a public hearing to interested parties, who may appear either in person or by attorney and give evidence or be heard respecting the subject of the hearing. Due notice of the hearing will be given by publication or otherwise, as may be deemed appropriate. Notices will contain a statement of the action which is contemplated and the time and place of the hearing.

The above rules and regulations are hereby adopted and shall be effective on and after July, 1913.

INFORMATION FOR IMPORTER OR BROKER

Regulation 3, 4 and 5 drawn under the Plant Quarantine Act of August 20, 1912, relate to the application for permit to import nursery stock from countries which maintain nursery stock inspection in accordance with the requirements of this act. (See Circular No. 44, Office of the Secretary Department of Agriculture.)

Applications may be made by telegraph, in which case the information called for in this form must be given.

The port of entry is the port where the goods are cleared from customs and the duty paid, and is therefore not necessarily the port of arrival.

Special permit for the entry of nursery stock from countries which do not maintain official nursery stock inspection as above may be obtained on application to the Federal Horticultural Board.

Nursery stock is defined in Section 6 of the Plant Quarantine Act as follows:

For the purpose of this Act the term "nur-

YEAR BOOK

sery stock" includes all field-grown florists' stock, trees, shrubs, vines, cuttings, grafts, scions, buds, fruit pits and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation, except field, vegetable and flower seeds, bedding plants, and other herbaceous plants, bulbs and roots.

The following classes of plants are included in nursery stock as defined above: Fruit trees, fruit-tree stocks, nut trees, grape-vines, bush fruits, roses, rose stocks, forest and ornamental trees and shrubs (both deciduous and evergreen), field-grown florists' stock, cuttings, scions or seedlings, fruit pits and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation not otherwise listed, except as noted above.

All woody plants and parts thereof for propagation or planting are included within the term "nursery stock" as used in this act.

"Field-grown florists' stock" is all florists' stock which is usually grown outside of greenhouses for all or part of the year.

"Herbaceous plants" are plants which perish annually down to (sometimes including) the root; that is, soft, succulent plants.

In the case of pines the specific names must be given in the application for permit to import. The importation of all five-leaved pines is prohibited from all European and Asiatic countries. (Quarantine No. 7, May 21, 1913).

Seeds and herbaceous plants not included in "nursery stock" as defined above and not under specific quarantine, may be imported without permit or compliance with other provisions of the Plant Quarantine Act.

No statement of quantity to be imported need be made in the application.

Except as to pines, a statement as to the nature of nursery stock to be imported is not required in this application, but full information must be given in the notices required by Regulation 8 immediately upon entry of nursery stock and before such stock is removed or shipped from port of entry.

AMERICAN NURSERY

CENSUS OF NURSERY PRODUCTS

A summarizing statement of the general results of the thirteenth census relative to the number of establishments and value of florist and nursery products in 1909, together with comparable data for 1899, was issued last month by Director E. Dana Durand, of the Bureau of Census, Department of Commerce and Labor. The report was prepared under the direction of Le Grand Powers, chief statistician, and John Lee Coulter, expert special agent, for agriculture. Further analysis of the report may result in slight modifications of the totals here presented before final publication, but it is not expected that they will effect materially the figures given herein.

Florist Products

It shows that in 1909 there was 10,614 florist establishments reporting products valued at \$34,872,000, while in 1899 there were 8,797 establishments with products valued at \$18,759,000; an increase of 1,817 establishments, or 20.7 per cent, and \$16,113,000, or 85.9 per cent.

In 1909, the value of the products of the 3,366 establishments reporting in the Middle Atlantic division was \$11,810,000, which was one-third of the total value of products in the United States. The East North Central division ranked second, as shown by the returns for the last two censuses, in both number of establishments and value of products. The absolute amount of increase in value of products during the decade 1900-1910 was nearly equal to that of the Middle Atlantic division, its per cent. of gain was 101.1 per cent., as compared with 67.1 per cent. for the Middle Atlantic division. The per cent. of increase was largest in the West South Central division, 268.9 per cent. A noteworthy increase was also shown in the Pacific division where the value of products increased from \$727,000 in 1899 to \$2,176,000 in 1909, or 199.3 per cent.

Nursery Products

The total value of nursery products re-

YEAR BOOK

ported from 5,582 establishments in 1909 was \$21,051,000; an increase of 591 establishments or 11.8 per cent., and \$10,927,000, or 107.9 per cent., in ten years. In 1909 the Middle Atlantic division ranked first with products valued at \$4,355,000, as compared with \$2,523,000 in 1899, an increase of \$1,832,000, or 72.6 per cent., during the decade 1899-1909. Although the number of establishments reporting nursery products, 7,159, was greatest in the East North Central division, the latter ranked fourth, being exceeded in value of products by the Middle Atlantic, West North Central and Pacific divisions. In per cent of increase, the Pacific division ranked first with 377 per cent., the West South Central division second, 179.4 per cent., and the South Atlantic division third, 117.4 per cent.

Comparison Products

In both the florist and nursery industries an increase was shown in the number of establishments and value of products for each geographic division. In both 1909 and 1899 the value of nursery products was greater than that of florist products in the West North Central, East and West South Central and Pacific divisions. This difference was particularly marked in the West North Central and Pacific divisions in 1909. Although the number of establishments reported florist products was greater than those reporting nursery products in the East South Central division, the value of products in this division was greater than the value of florist products. The very much greater value of florist products in the country as a whole, was contributed almost entirely by the New England, Middle Atlantic and East North Central divisions. However, the value reported from the West North Central and Pacific divisions was over \$2,000,000.

Value of Products by States

In 1909 New York ranked first with a total value of products of \$5,149,000; Pennsylvania was next with \$3,803,000, and Illinois third with \$3,695,000. In 1899 the order was

AMERICAN NURSERY

the same ,except New Jersey was third. However, in 1899 the value of products for these states amounted to but little more than half that of 1909. Increases are shown in every state, except the Distric tof Columbia, where in 1899 government institutions were included in the census reports, while in 1909 they were not enumerated.

The three ranking states in value of nursery products in 1909 were New York \$2,751,000, California \$2,213,000, and Texas \$1,253,000. The standing in 1899 was, New York, Iowa, and Illinois. An increase in the value of nursery products was reported from every state, except Maine, Vermont, Virginia, South Carolina and the District of Columbia. The gains in all three states of the Pacific division were especially remarkable, more particularly in Washington where the value in 1909 was almost twenty times as great as that of 1899.

CENSUS OF APPLE TREES

A summarizing statement of the general results of the Thirteenth Census relative to the number of farms reporting apple trees of bearing age and those not yet of bearing age, together with the number of trees in each class as of April 15, 1910, and giving the number of bushels of apples produced in 1909 and the value of the crop has been issued by Director Durand, of the Bureau of the Census, Department of Commerce and Labor. Comparable data are given for 1900 wherever possible. The report was prepared under the direction of Le Grand Powers, chief statitistician, and John Lee Coulter, expert special agent for agriculture. Further analysis of the report may result in slight modifications of the totals here presented before final publication, but it is not expected that they will affect materially the figures given herein.

Disease in Trees of Bearing Age

At the census of 1900, taken as of June 1, there were reported 201,794,000 apple trees of bearing age, as against 151,323,000

YEAR BOOK

trees in 1910 (census taken as of April 15), a decrease of 50,471,000 trees, or 33.4 per cent.

In 1910 there were 2,980,398 farms reporting the growing of apple trees, or 46.8 per cent. of the total number of farms in the United States. The average number of trees per farm reporting is given as 51. No report was received in 1900 showing the number of farms reporting.

The return of the 1900 census, likewise, did not secure the number of trees under bearing age. In 1910, however, 1,498,746 farms, or 23.6 per cent. of the total, had 65,792,000 trees not of bearing age, or an average of 44 per farm.

The present census shows that in 1909 there were produced in the United States, 147,522,000 bushels of apples, having a total value of \$83,231,000. The production at that time was somewhat less than it was ten years previously, when 175,397,000 bushels were gathered. The reports of the 1900 census give no information as to value of apples.

Production by Divisions

Of the nine main geographical divisions into which the census divides the country, the East North Central Division in 1910 and 1900 reported the largest number of trees of bearing age, 34,135,000 and 48,493,000, respectively. In 1909 a total of 25,081,000 bushels of apples were gathered, against 47,650,000 bushels in 1899. The value of the crop in 1909 was \$14,669,000.

The division ranking next in the number of trees of bearing age is the West North Central. In 1910 this division had 31,745,000 trees of bearing age, against 43,678,000 trees in 1900. At the present census 22,633,000 bushels of apples were produced by this division, valued at \$11,792,000. Ten years ago the production amounted to 14,321,000 bushels.

The South Atlantic division, with 20,674,000 trees of bearing age, is third in rank. In 1900 the corresponding number of trees was 25,526,000, a slight falling off thus being

AMERICAN NURSERY

shown. The trees of bearing age in 1909 produced 18,375,000 bushels valued at \$9,461,000; but in 1899 there were gathered 26,774,000 bushels, the decrease during the ten years being 8,399,000 bushels.

The middle Atlantic division reports at most as many trees of bearing age as the South Atlantic, and shows more apples produced than any of the other divisions. In 1910 there were 20,302,000 producing trees, as compared with 28,640,000 in 1900, the decrease amounting to 8,338,000 trees. The number of bushels gathered in 1909 was 37,865,000, valued at \$19,857,000. In 1899 the trees in this division produced 52,813,000 bushels.

Production by States

Among the several states, Missouri, New York and Illinois, together contained in 1910, almost 25 per cent. of all apple trees of bearing age in the United States.

The number of trees of bearing age in Missouri at the census of 1910 was 14,360,000, this being a decrease since 1900 of 5,680,000 trees. The production of apples in 1909 amounted to 9,969,000 bushels, while in 1900 it was 6,496,000 bushels, a gain of 3,473,000 bushels. The value of the 1909 crop was \$4,886,000.

New York reported 11,248,000 trees of bearing age in 1910, against 15,055,000 trees in 1900. This state alone produced more apples in 1909 than the entire East North Central division, 25,409,00 bushels, valued at \$13,343,000. In 1899, a crop of 24,111,000 bushels was gathered.

In 1910, there were 9,901,000 trees of bearing age in the State of Illinois, while in 1900 the number was 13,430,000 trees. Over 3,093,000 bushels of apples were produced in 1909, against 3,178,000 bushels in 1899, a falling off of over 6,000,000 bushels. The value of the 1909 crop was \$2,112,000.

While the states of Pennsylvania and Michigan did not report as large a number of trees in 1910 as the above-named states, they each produced a considerably greater quantity of apples than Missouri or Illinois.

YEAR BOOK

CENSUS OF PEAR TREES

At the census of 1910, taken as of June 1, there were reported 17,716,000 pear trees of bearing age, as against 15,172,000 trees in 1910 (census taken as of April 15,) a decrease of 2,544,000 trees, or 16.8 per cent. In 1910 there were 1,276,366 farms reporting the growing of pear trees, or 20.1 per cent. of the total number of farms in the United States. The average number of trees per farm reporting is given as 12. No report was received in 1900 showing the number of farms reporting.

The returns of the 1900 census, likewise, did not secure the number of trees under bearing age. In 1910, however, 611,788 farms (or 9.6 per cent. of the total), had 8,804,000 trees not of bearing age, or an average of 14 per farm.

The present census shows that in 1909 there were produced in the United States 8,841,000 bushels of pears, having a total value of \$7,911,000. The production at that time was somewhat greater than it was ten years previously, when 6,625,000 bushels were gathered. The reports of the 1900 census give no information as to the value of pears.

Trees and Production, by Divisions

Of the nine main geographical divisions into which the census divides the country, the middle Atlantic division in 1910 and 1900 reported the largest number of trees of bearing age, 3,670,000 and 3,925,000, respectively. A total of 2,185,000 bushels of pears were gathered in both 1909 and 1899. The value of the crop in 1909 was \$2,029,000.

The division ranking next in the number of trees of bearing age is the East North Central. In 1900 this division had 3,560,000 trees of bearing age, against 3,799,000 trees in 1900. At the present census 1,623,000 bushels of pears were produced by this division, valued at \$1,332,000. Ten years ago the production amounted to 784,000 bushels.

The South Atlantic division, with 2,326,000 trees of bearing age, is third in rank. In 1900 the corresponding number of trees

AMERICAN NURSERY

was 2,292,000, a slight gain thus being shown. The trees of bearing age in 1909 produced 975,000 bushels, valued at \$680,000, but in 1899 there were gathered only 744,000 bushels, the increase during the ten years being 231,000 bushels.

The Pacific division also reports a relatively large number of trees of bearing age and shows more pears produced than any of the other divisions. In 1910 there were 1,975,000 producing trees, as compared with 3,198,000 in 1900, the decrease amounting to 1,223,000 trees. The number of bushels gathered in 1909 was 2,614,000 valued at \$2,357,000. In 1899 the trees in this division produced 2,103,000 bushels.

These four divisions reported 76.0 per cent. of the total produced in 1909.

Trees and Production by States

Among the several states, New York, California and Michigan, together contained in 1910 over 30 per cent of all pear trees of bearing age in the United States.

The number of such trees in New York at the census of 1910 was 2,142,000, this being a decrease during the ten years of 42,000 trees. The production of pears in 1909 amounted to 1,343,000 bushels, while in 1900 it was only 960,000 bushels, a gain of 383,000 bushels. The value of the 1910 crop was \$1,418,000.

California reported 1,411,000 trees of bearing age in 1910, against 2,513,000 trees in 1900. This state alone produced more pears in 1909 than the entire East North Central division, 1,928,000 bushels, valued at \$1,661,000. In 1899 a crop of 1,913,000 bushels was gathered.

In 1910, there were 1,136,000 trees of bearing age in the state of Michigan, while in 1900 the number was 1,870,000 trees. A total of 666,000 bushels of pears were produced in 1909, against 171,000 bushels in 1899, an increase of over 495,000 bushels. The value of the 1909 crop was \$536,000.

YEAR BOOK

CENSUS OF PECAN TREES

A summarizing statement of the general results of the thirteenth census relative to the production of pecans in 1909, has been issued by Director Durand, of the Bureau of Census, Department of Commerce and Labor. It was prepared under the direction of Le Grand Powers, chief statistician, and John Lee Coulter, expert special agent, for agriculture. Further analysis may result in immaterial modifications of the totals here presented before final publication.

At the census of 1900, taken as of June 1, there were reported 643,000 pecan trees of bearing age, as against 1,620,000 trees in 1910 (census taken as of April 15), an increase of 977,000 trees or 151.9 per cent. In 1910 there were 37,549 farms reporting the growing of pecan trees and the average number of trees per farm reporting is given as 43. No report was published in 1900 showing the number of farms reporting. The returns of the 1900 census also, did not secure the number of trees under bearing age. In 1910, however, 43,944 farms had 1,685,000 trees not of bearing age, or an average of 38 per farm.

The present census shows that in 1909 there were produced in the United States 9,891,000 pounds of pecans, having a total value of \$971,596. The production at that time was more than three times what it was ten years previously, when 3,207,000 pounds were gathered. The reports of the 1900 census give no information as to the value of pecans.

Trees and Production by States

Among the states, Texas alone had, in 1910, over 65 per cent of all pecan trees of bearing age in the United States, the actual number being 1,088,000 trees. In 1900 the number was 359,000. In 1909 there were produced 5,823,000 pounds, valued at \$556,203, but in 1899 the production was only 1,811,000 pounds.

Oklahoma is next in rank with 97,000 trees of bearing age in 1910. The number

AMERICAN NURSERY

in 1900 was 5,000. The value of the 894,000 pounds produced in this state in 1909 was \$59,481. In 1899 the production amounted to only 2,000 pounds.

While Georgia was third in the number of trees of bearing age in 1910, reporting a total of 76,000, its production was exceeded by that of both Louisiana and Mississippi. Georgia had 30,000 trees in 1900. Its production in 1909 amounted to 354,000 pounds, valued at \$47,845, but in 1899 only 27,000 pounds were produced.

There were 37,000 trees of bearing age in Louisiana in 1910. This is a decrease of 4,000 trees, during the ten years since 1900, but this state is third in the production of pecans in 1909, its trees having yielded 724,000 pounds, valued at \$70,635, as compared with 87,000 pounds in 1899.

There was an increase of 21,000 in the number of trees of bearing age from 1900 in Mississippi. In 1900 the number was 40,000, and in 1910, 61,000. In 1909 there were produced in this state 637,000 pounds of pecans, against 242,000 in 1899. While this state was fourth in the amount of its yield in 199, the value of the production \$79,936, was second to that of Texas.

CENSUS OF FRUITS AND NUTS

A summarizing statement of the general results of the Thirteenth Census relating to tropical fruits, orchard fruits, grapes, small fruits, nuts and certain specified fruit products in California, was issued recently by Director Durand, of the Bureau of the Census, Department of Commerce and Labor. In addition to the number of farms reporting and the number of trees and vines of bearing age, as of date April 15, 1910, the summary gives the amount and value of fruits and nuts produced in 1909. The fruit products shown are those prepared on farms only, and do not include those reported by manufacturing establishments. Comparable data are given for 1900 wherever possible.

YEAR BOOK

The statement was prepared under the direction of LeGrand Powers, chief statistician, and John Lee Coulter, expert special agent for agriculture. Further analysis may result later in slight modifications of the totals, but it is not expected that they will affect materially the figures.

Tropical Fruits

The production of all tropical fruits in 1909 was valued at \$16,752,101, as compared with \$7,219,082 in 1899, an increase of \$9,553,019. Oranges to the number of 14,436,180 boxes, valued at \$12,951,505, were produced in 1909. The lemon production amounted to 2,756,221 boxes, and the value to \$2,976,571; olives, 22,990,353 pounds, valued at \$401,277; figs, 22,990,353 pounds, valued at \$260,153; pomeloes, or grape fruit, 122,515 boxes, valued at \$143,180, while the production of all other tropical fruits amounted to 140,374 pounds, valued at \$19,415.

Orchard Fruits

The production of all orchard fruits was given as 31,501,507 bushels in 1909, as compared with 22,690,696 bushels in 1899, a gain of 8,810,811 bushels. The value of the 1909 crop amounted to \$18,358,897, as against \$14,526,786 in 1899, an increase of \$3,832,111.

There were 9,317,979 bushels of plums and prunes produced in 1909, valued at \$5,473,539. The yield of peaches and nectarines amounted to 9,267,118 bushels and the value to \$4,573,775; of apples, 6,335,073 bushels, valued at \$2,901,662; apricots, 4,066,823 bushels, at \$2,768,921; pears, 1,928,097, at \$1,660,963; cherries, 501,113 bushels at \$951,624; and all other orchard fruits, 85,404 bushels at \$28,413.

Grapes

In 1909 the production of grapes amounted to 1,979,686,525 pounds. This was an increase of 1,258,253,125 pounds over 1899, at which time 721,433,400 pounds of grapes were gathered. The value of the 1909 crop was \$10,846,812, while in 1899 it was \$5,622,825.

AMERICAN NURSERY

Small Fruits

There was an increase of 12,242,169 quarts in the production of small fruits during the ten years since 1899. In 1909 the yield equaled 26,824,120 quarts, valued at \$1,789,214, and in 1899, it was 14,581,951 quarts, valued at \$911,411. Strawberries to the number of 15,694,326 quarts were produced in 1909, valued at \$1,149,475; raspberries and loganberries, 5,222,117 quarts, at \$304,169; blackberries and dewberries, 4,898,524 quarts at \$282,383; currants, 852,378 quarts at \$43,508; gooseberries, 145,119 quarts, at \$9,086; and of all other small fruits, 11,656 quarts at \$593.

Nuts

The production of nuts in California was reported as 28,378,115 pounds, valued at \$2,959,845 in 1909, while in 1899 it was 17,775,505 pounds, worth \$1,518,708. A total of 21,423,266 pounds of Persian or English walnuts, valued at \$2,247,193, were reported in 1909. The almond production amounted to 6,692,513 pounds, valued at \$700,304; and of all other nuts, 253,336 pounds, valued at \$12,348.

Imported Nursery Stock

The following table indicates the distribution by states of nursery stock imported during the fiscal years 1914-15 and 1915-16. It will be noted that in spite of the disturbed conditions in Europe there has been a considerable increase in the amount of nursery stock imported this year over last.

State.	Number of cases.	
	1915-16	1914-15

A Nursery Tree

Few purchasers of nursery stock realize the work and care given the tree which is finally placed in their hands ready for planting. Let us trace an apple seedling from its origin, probably in France from whence most fruit seedlings come to the time it is delivered to the Ohio orchardist or farmer.

The tree which he plants in the fall of 1916 or spring of 1917 originated in an apple seed in France in the year 1913; planted there in the spring of 1914 it developed into an apple seedling about two feet in length during the growing season of that year. In

YEAR BOOK

the meantime a salesman for the French nurseryman has been in this country and sold this seedling together with thousands of other seedlings to an Ohio nurseryman.

This nurseryman, after securing a permit from the Federal government imports his order, usually through a broker, to this country paying of course the duty required on this class of stock. Upon arrival at destination an inspection of the seedling is made to prevent the introduction of dangerous insects or diseases.

The seedling may now follow one of two courses. It may at once be stored by the nurseryman until spring when it is planted out in the nursery row to be budded in July to the variety of apple to be grown. If the other and more common practice is followed the root is cut into several pieces and scions of the variety to be grown are grafted to these root pieces. These grafts are stored until spring and then lined out in the nursery row. It now spends, as a rule, two growing seasons in the Ohio nursery where it must be cultivated, pruned and sprayed regularly until the Fall of 1916. If it has successfully run the gauntlet of drouths, insect disease and rodent attack, hail storms, winter injury and final official inspection it is ready to market. It is still to be lifted from the soil, placed in proper grade, fumigated, labeled and packed for shipment.

This should end the vicissitudes of the tree but disaster often overtakes it between the time it leaves the nursery packing grounds and takes its place in the orchard row. Delay in transit and lack of proper care after being received by the orchardist as well as careless planting often prove fatal.

Be willing, therefore, Mr. Planter, to pay a fair price for the tree which has required so much attention, and be careful that no negligence on your part should result in its failure to take a permanent place in your orchard.—Official Bulletin Board of Agriculture of Ohio.

A Great Step In Advance

Editor American Nurseryman:

The American Association of Nurserymen at the Milwaukee Convention adopted a resolution inviting all district and state associations of nurserymen each to name a member of an Advisory Board for the purpose of advice and counsel and co-operation with our Executive Committee in all matters where other nurserymen or other associations could be of assistance when assistance was desired or needed. This resolution was proposed by the Executive Committee; it was the first resolution offered, and it was adopted unanimously by the Convention, indicating the importance attached to it by the nurserymen at Milwaukee. Following the instructions contained in the resolution, I wrote to the President or the Secretary of every nursery association that I knew of. It has been very gratifying to note the cordiality with which the suggestion was received and the promptness with which the invitation was accepted, and I am now sending you a list of the members of the Advisory Board so far as I have been notified of their appointment.

The idea of this Advisory Board was a very happy one. The American Association of Nurserymen can have neither the wish nor the ability to serve any selfish interests; it stands in the broadest way for the interests of the whole trade in the entire country; it represents no section, it speaks for no class; it

represents all sections and all classes: retailers and wholesalers, catalogue and agency growers and sellers, and in nearly every state. Now, with the Advisory Board, there has been created what is in fact a Congress of the nursery trade association; a clearing-house is effected where local problems and peculiar conditions can be disposed of whenever other nurserymen or other organizations can be of service to that end. It is a bringing together so far of seventeen associations with nearly two thousand members and representing most of the capital invested in the nursery business. And when the Advisory Board speaks, it speaks for the whole trade. It will do more than that: it will bring a better acquaintance and therefore a better understanding; it will put the various associations and their members into closer touch with each other; it will mean a deeper sympathy and a fuller understanding; it will bring a realization that the interests of all nurserymen are exactly the same, whether growers or sellers, wholesalers or retailers, catalogue or agency; and it will afford opportunity to counsel together to the end that differences may be eliminated; and with that closer acquaintance and friendly counsel, we shall gain what we have so greatly lacked and so much needed, the co-operation without which we have been able to do so little but with which we can expect to accomplish so much. We have the same interests and the same ends, and we can best serve them only by traveling the same road and in company. This Advisory Board moves us a long step in the right direction.

JOHN WATSON, President
American Association of Nurserymen.

NURSERYMEN

OF THE

United States, Canada and Europe

To avoid delay and possible loss of stock no nurseryman should ship to another State without first having learned the requirements of that State.

All persons who intend to import trees or plants from any foreign country should first apply for and receive a permit from the Federal Horticultural Board, U. S. Department of Agriculture, Washington, D. C.

[Foreign mails may not be used for the importation into the United States of growing or living plants, seeds, and other plant products for propagation, except field, vegetable and flower seeds. This prohibition does not apply to plants or plant products ordered by or intended for and addressed to the Office of Foreign Seed and Plant Introduction, U. S. Department of Agriculture, Washington, D. C.]

ALABAMA

A signed copy of inspection certificate must be filed with the secretary of the Alabama State Board of Horticulture, and an Alabama license obtained, also Alabama tags. Nursery and dealers' license fee, \$10.00. Agents must obtain license through their principal. License fee for agents, \$1.00. Dealers must designate nurseries from whom stock handled is purchased. A tag must be attached to every separate order or lot of nursery stock delivered in the state. Tags are furnished at cost: first one hundred, 65 cents postpaid; five hundred, \$1.60; one thousand, \$2.20, sent collect by express.

All scions and bud sticks must be properly fumigated. The following insects and fungous diseases are quarantined against: San Jose scale, new peach scale, woolly aphis, crown gall, black knot, peach yellows, peach and plum rosette, citrus canker, white fly, gypsy moth and browntail moth. Trees liable

ARIZONA

to scale infection must be properly fumigated with hydrocyanic acid gas. All kinds of citrus trees are quarantined except Satsuma orange and Kumquat. The two latter may be shipped from localities free from citrus canker upon obtaining special citrus permit, and upon compliance with the special rules covering shipments of such trees and other hosts of white fly, or citrus canker, which is, that such trees be completely defoliated and dipped (except roots) in 6-4-50 Bordeaux mixture.

Special citrus permit tags are supplied at \$1.00 a hundred; 50 cents a hundred for additional lots. These must be used in addition to regular tags on all shipments containing citrus trees. State Horticulturist, Auburn, Ala.

ARIZONA.

ARIZONA. Nursery stock shipped into the state must be prominently labeled with the name and address of both the shipper and consignee, and must be accompanied by a valid certificate of inspection or a copy of such certificate by a duly authorized inspection official. Shipments into the state, con-

ARIZONA

sisting of or containing plants not grown in the locality from which shipment was made, must in addition, specify where such plants were grown.

State quarantine orders now in effect and of interest to nurserymen prohibit; (No. 1) the importation of stock from sections infested by the alfalfa weevil; (No. 4) rooted grape vines from north of the north line of San Bernardino, Kern, and San Luis Obispo counties, California; (No. 8) the importation of citrus nursery stock from all other states and territories and of cape jessamine, privets, and rubber plants from North Carolina, South Carolina, Georgia, all states bordering on the Gulf of Mexico, and Yuba County California; (No. 11) the importation of olive trees. Other quarantines relate to the Mexican orange maggot (quarantine made practically inoperative owing to establishment of Federal quarantine), cotton boll weevil, date palm scales, and citrus canker. None of these latter concern shipments of nursery stock into Arizona from outside sources.

All shipments of living plants into the state of Arizona are inspected by state inspectors and not delivered until a certificate of release is issued, in each case, to common carriers and the consignees. If trees or plants are infested or infected with insect pests or plant diseases of general occurrence in the section of the state where the shipment is received, treatment to eradicate, or the separation of the infested or diseased trees or plants, is in most cases permissible; otherwise all plants or trees of the kind found to be infested or diseased are held in quarantine and are shipped from the state or destroyed at the owners option. Copies of quarantine orders furnished upon application. Dr. A. W. Morrill, State Entomologist of Arizona, Arizona Commission of Agriculture and Horticulture, Phoenix, Arizona.

ARKANSAS.

ARKANSAS. Shipments of nursery stock into the state must be accompanied by a copy of the valid certificate of inspection, a copy of the valid permit issued to the nurseryman by the State Entomologist of this state and must bear the name and address of the consignor and consignee with a statement of the contents of the shipment; all shipments not so labeled or tagged must be refused for shipment by the carrier. Carriers bringing into the state shipments of nursery stock which originated in foreign countries or foreign possessions of the United States must notify the State Entomologist in writing and must hold such stock at any place designated by him until the same has been duly inspected and released.

Nurserymen located out of the state may secure permits by filing with the State Entomologist a copy of their certificate. George G. Becker, Acting State Entomologist, Fayetteville, Ark.

CALIFORNIA. Shipments of nursery stock into California are held by the transportation companies until inspected by state quarantine guardians. All packages must be marked with the name and address of the shipper, name of the consignor and name of the place where the stock is grown. Dhite pine trees, currants and gooseberries from points east of the line N. Dakota to Texas are refused entry to California. Peach, apricot and almond trees coming from districts where yellows and rosette are known to exist, shall be refused entry and shall be destroyed or returned to the shipper. Notices of shipment of nursery stock to California should be sent to the Horticultural Quarantine Officer, Room 11, Ferry Building, San Francisco, Cal., and to the state quarantine guardians at the point of destination. COLORADO. The State entomologist has general supervision of the inspection of nurseries and orchards to prevent the introduction and spread of injurious insects and plant diseases. County horticultural inspectors in fruit-growing counties of the state are appointed by the county commissioners. All nursery stock coming into the state must bear certificates of inspection and fumigation and on arrival in counties that have inspectors is turned over to them and released to consignee if it passes inspection. C. P. Gillette, State Entomologist, Fort Collins, Colo.

CONNECTICUT

CONNECTICUT. All nursery stock shipped into this state shall bear on each package a certificate that the contents of said package have been inspected by a state or government officer and that said contents appear free from all dangerous insects and diseases. If nursery stock is brought into the state without such a certificate, the express, freight, or other transportation company or person shall, before delivering shipment to consignee, notify the State Entomologist of the facts, giving name and address of consignee, origin of shipment, and approximate number of cars, boxes, or packages, and probable date of the delivery to the consignee. The State Entomologist may cause the inspection and if infested the treatment of the stock. No person, firm or corporation shall unpack any woody field-grown nursery or florists' stock brought into this state from foreign countries except in the presence of an inspector, unless given permission to do so by said State Entomologist or one of his deputies. If such stock is found infested with any dangerous pests the State Entomologist may at his discretion order it treated. Any person violating any of the provisions of this act shall be fined not more than \$50. Dr. W. E. Britton, State Entomologist, New Haven, Conn.

FLORIDA

To each package of nursery stock shipped into the state must be attached a Florida permit certificate tag and a certificate issued by the state inspection official of the state where grown. These tags may be secured at cost from the undersigned by the deposit of a satisfactory certificate of inspection signed in ink by the proper inspection official of the state of issue. A duplicate invoice covering each shipment made into this state must be filed in the office of the Nursery Inspector at Gainesville, Fla., promptly after the shipment has gone forward. The shipment of citrus into Florida is prohibited.

FLORIDA

All host plants of San Jose Scale must be fumigated before shipment. The entrance of all infested or diseased stock is prohibited. All plants capable of defoliation must be defoliated. Shipments must be completely and securely covered or wrapped. Nursery Inspection Circular No. 5 explains all of the details and will be sent free to those applying to F. M. O'Byrne, Nursery Inspector, State Plant Board, Gainesville, Fla.

GEORGIA

GEORGIA. Nurseries are inspected annually. A signed duplicate of inspection certificate, together with a statement by the nurserymen that all stock intended for Georgia will be fumigated in accordance with directions furnished them, must be filed in the office of the state entomologist. Official tags of the Georgia State Board of Entomology will be furnished by the state entomologist at the following price: One hundred tags, 60 cents, postpaid; 200 tags, 85 cents, postpaid; 300 tags, \$1.10, postpaid; 500 tags, \$1.35, sent by express collect; 1,000 tags, \$2.00, sent by express collect. Each shipment of nursery stock into the state of Georgia must bear the official tag of the Georgia State Board of Entomology, and also a duplicate certificate of inspection of the state from which the shipment is made. IDAHO.

IDAHO. No person, firm or corporation shall import or sell nursery stock without first applying to the State Board of Horticultural Inspection and filing a bond in the sum of \$5,000, and securing firm license upon payment of \$10. Shipments into the state should bear a copy of an official certificate of fumigation emanating from the place where the stock was grown. All shipments into the state must bear a label showing the name of the shipment, the locality where grown, and variety of nursery stock, and all nursery stock, fruit trees, or horticultural plants sold or delivered by principal or agents shall be true to name and variety as represented. All nur-

ILLINOIS

sery stock shipped into this state, whether bearing certificate of inspection or not, must be inspected again upon its arrival in the state, the consignee paying for such inspection. Every nursery firm doing business in this state must pay \$1 additional for each agent who represents them. Pines, currants and gooseberries from eastern states are prohibited. Guy Graham, State Horticultural Inspector, Boise, Idaho.

ILLINOIS.

ILLINOIS. State nurseries are inspected and certified not later than October 1. An inspection certificate shall be valid for one year from date of inspection. The state entomologist is authorized to revoke a certificate if he finds it is being used in violation of the law. He is also required to furnish all Illinois nurserymen with a list of state and government inspectors whose certificates may be received as equally valid as his own, and the nurseryman receiving stock under such certificate is authorized to substitute for them the Illinois certificate of inspection. Each dealer in nursery stock who has no nursery of his own, and each agent for a nursery located outside of Illinois, is required to furnish to the state entomologist annually a sworn statement, showing that the stock in which he deals has been duly inspected and to submit for approval a copy of the certificate of inspection. Nursery stock shipped into the state must bear a certificate of inspection attached to each car, box, bale, bundle or package. Dr. S. A. Forbes, State Entomologist. P. A. Glenn, Chief Horticultural Inspector, Urbana, Ill.

INDIANA.

INDIANA. All nurseries are inspected between June 1 and October 1, and at such other times as the head of the inspection department may consider advisable. Stock sent into or within the state must be plainly labeled with the name of the consignor and the consignee and must bear a certificate signed by a state or government official, showing that the enclosed stock has been inspected and found free from injurious insects and plant diseases. All foreign-grown stock must be inspected upon arrival at its destination in Indiana.

All dealers and agents engaged in selling or soliciting orders for nursery stock in the

IOWA

state of Indiana must take out a license, which is issued by the State Entomologist. All nursery firms or other persons whose place of business is outside the state of Indiana and who ship nursery stock into Indiana are required to file with the State Entomologist a copy of their valid certificate of inspection and procure a license, which is good for one year from the date of issue. The fee for license is \$1 in all cases. Frank N. Wallace, State Entomologist, Indianapolis, Ind.

Each package, parcel, box, bundle, or bale of nursery stock shipped or moved into Louisiana for delivery in this state from any state or country must be prominently labeled with a copy of a valid and unexpired certificate of inspection from the authorized nursery inspector of the state or country where the nursery stock was grown, and must also be prominently labeled with a copy of a valid and unexpired certificate from the entomologist of Louisiana. Written authorization and special certificate tags must be secured from the entomologist for each shipment of citrus nursery stock to be shipped into Louisiana for delivery in the state.

A fee of \$5 must be paid for a permit to ship nursery stock into Louisiana, and a copy of nursery inspection certificate from the authorized nursery inspector of the state or country in which the stock was grown must accompany the request for a permit to sell nursery stock in the state.

Orders for certificate tags to be used on shipments for delivery in Louisiana must be placed with the entomologist and money for tags must accompany the order. Up to 1,000 tags, delivered by insured parcel post, the price will be \$1.55 for the first 100 tags, and 40 cents for each additional hundred. Orders of over 1,000 tags will be shipped by express, collect, at \$1.50 for the first hundred and 35 cents for each additional hundred.

MAINE

MAINE

MAINE. All nursery stock shipped into the state shall bear on each box or package a certificate that the contents have been inspected. The state horticulturist has power to inspect at point of destination all stock entering the state. No person excepting growers shall carry on the business of selling nursery stock or soliciting purchases without first obtaining a license. The license fee shall be \$5 per annum. The license shall be issued in the name of the dealer, salesman or agent, as the case may be. C. L. Wilkins, Horticulturist, Department of Agriculture, Augusta, Me.

MASSACHUSETTS

MASSACHUSETTS. Nurseries in the state are inspected annually. Agents or other persons, excepting growers who desire to sell nursery stock in the state, shall make application to and receive from the state nursery inspector an agent's license, and shall file with the state nursery inspector names and addresses of all persons or nurseries from whom they purchase stock. It shall be unlawful for any person, firm or corporation to sell, deliver or ship within the state any nursery stock, unless such person, firm or corporation holds a grower's certificate or an agent's license and a copy of such certificate or license must accompany each car, box or package delivered or shipped. The state nursery inspector has power to inspect all shipments coming into the state at point of destination and, if infested or infected, may cause it to be returned to consignor or destroyed. Dr. H. T. Fernald, State Nursery Inspector, Amherst, Mass.

MICHIGAN.

MICHIGAN. Nurseries are subject to inspection; infested trees must be destroyed and the remainder of the stock within a half mile must be fumigated. Shipments into the state must bear on every package, plainly labeled, the name of the consignor and consignee, statement of contents, and a certificate showing that the contents have been inspected by a state or government officer, and if of species subject to the attack of San Jose scale must be fumigated with hydrocyanic acid gas. Certificates of fumigation must also be attached, together with a certificate of inspection. This applies to individual orders when several are contained in the same shipment. All nurserymen, whether residents of Michigan or other states, who wish to grow or sell stock within the state, must apply to the state inspector of nurseries on or before August first of each year for a license, for which the fee is \$5. A bond for \$1,000 must also be filed. Certificates of inspection must be filed with the state inspector of nurseries before any stock is shipped into the state. Prof. L. R. Taft, State Inspector of Nurseries, East Lansing, Mich.

MISSISSIPPI

Nurseries are inspected at least once each year after August 1.

Nurseries outside of Mississippi desiring to ship plants into this state must file with the Entomologist, Agricultural College, Mississippi, a certificate of nursery inspection issued by the duly authorized state official in charge of nursery inspection.

This certificate must state that the nursery is properly equipped for fumigating plants with hydrocyanic acid gas. The proprietor or manager of the nursery must also file a statement that all apple, pear, peach, and plum stock will be fumigated immediately before being shipped into Mississippi.

Each package, box, bale, or bundle of nursery stock shipped into this state must be accompanied by a copy of the certificate of inspection and all shipments containing apple, pear, peach, or plum stock must also be accompanied by a statement that the plants have been fumigated with hydrocyanic acid gas. All shipments of nursery stock must be plainly marked to show the names and addresses of both consignor and consignee, the number and kinds of plants, and the name of locality where grown.

Nurseries are required to furnish the Entomologist, Agricultural College, Mississippi, a duplicate invoice giving exact contents of each shipment of nursery stock made into this state. These duplicate invoices should be mailed at the same time that the shipments are made.

Because of the prevalence of citrus canker, the importation of all kinds of citrus plants into Mississippi has been prohibited. R. W. Harned, Entomologist, Agricultural College, Miss.

MISSOURI.

MISSOURI. Nurseries are inspected annually. Each nursery outside of Missouri shipping stock into Missouri must apply at the office of the Chief Inspector for a permit which will be issued upon filing the necessary papers and copy of their nursery inspection certificate. No fee is charged for the permit. All agents or salesmen for outside nurseries must apply for an agent's permit. Every package of nursery stock shipped into the state must be clearly labeled with the name

MISSOURI

of the consignor, consignee, statement of contents and a certificate showing that the stock therein contained has been inspected where grown by a duly authorized inspector and found to be apparently free from dangerously injurious insect pests and plant diseases. Transportation companies are not permitted to deliver nursery stock unless so labeled. Leonard Haseman, Entomologist and Chief Inspector, University of Missouri, Columbia, Mo.

MONTANA.

MONTANA. All stock brought into the state must be unpacked, inspected and fumigated at one of the designated quarantine stations, viz.: Glendive, Miles City, Billings, Bozeman, Lewiston, Helena, Great Falls, Missoula, Victor, Como, Darby, Plains, Mondak, Glasgow, Havre, Kalispell and Eureka. Nursery stock may be inspected and fumigated at other points of delivery on payment of all costs. All shipments coming into Montana from other than licensed nurseries are subject to an inspection fee of 10 per cent of the invoice price of the shipment, or 50 cents minimum fee. Notice of shipment, including an invoice of stock, must be sent to M. L. Dean, Montana State Horticulturist, Missoula, Mont.

NEVADA. Nursery stock shipped from other states shall bear on the outside of each car, bale or package, a label giving the names of

NEW JERSEY

the consignor and consignee, together with a copy of inspection certificate of recent date. Such certificate of inspection must bear the signature of a qualified person in authority in the state in which such nursery stock was grown. No transportation company shall deliver any nursery stock lacking such official certificate of inspection. S. B. Doten, Director Experiment Station, Reno, Nev.

NEW HAMPSHIRE.

NEW HAMPSHIRE. Nurseries are inspected at least once each year. Shipments into the state must be accompanied by a certificate of inspection or, in lieu thereof, an affidavit showing that the stock has been fumigated with hydrocyanic acid gas, using not less than 2-10 of one gram of cyanide of potassium per cubic foot of space, in an airtight compartment for not less than forty minutes. A copy of the certificate of inspection, or a copy of the affidavit, must be attached to each car, box or package shipped into the state. Commissioner of Agriculture, Hon. Andrew L. Felker, Concord, New Hampshire.

NEW JERSEY.

NEW JERSEY. The law requires the inspection of all nurseries at least once in each year. Shipments into the state must be accompanied by a certificate of inspection, or copy thereof, attached to each car or parcel, together with a statement from the shipper that the stock therein is a part of the stock inspected and whether such stock has been fumigated with hydrocyanic acid gas or not.

NEW JERSEY

If stock comes into the state without a certificate, it may be detained for examination, wherever found, by the state entomologist, and if found to be infested with any insects injurious, or liable to become so, will be destroyed. Dr. T. J. Headlee, State Entomologist, New Brunswick, N. J.

NEW YORK

NEW MEXICO.

NEW MEXICO. No law relative to transportation of nursery stock. The Territorial Legislature of 1903 provided for county boards of horticultural commissioners, who were given authority to control orchard pests. Prof. Fabian Garcia, Horticulturist, Agricultural Experiment Station, Agricultural College, N. M.

NEW YORK.

New York. All nursery stock shipped from any point in the state of New York must have attached to each car, box, bale, or package, a copy of a certificate of inspection issued by the State Department of Agriculture, signed by the Commissioner of Agriculture and valid to September 1, 1917.

All nursery stock shipped into the state must be so shipped as to comply with the requirements of the Agricultural Law. Transportation companies shall immediately upon receiving consignments notify the Commissioner of Agriculture of the fact that such consignments are in their possession or en route to some point within the state and give the name and address of the consignor and consignee and the destination of each shipment and the name of the transportation company bringing such stock and the route or routes over which it is brought and shall also make such further report relative to such shipments as the Commissioner of Agriculture may from time to time require. (Sample forms of notices will be sent on application.)

To Importers of Nursery Stock and Custom House Brokers

Custom house brokers importing or bringing nursery stock into the state shall, immediately upon receiving consignments, notify the Commissioner of Agriculture of the fact that such consignments are in their possession or en route to some point within the state and give the name and address of the consignor and consignee, and the destination of each shipment and the name of the transportation company bringing such stock and the route over which it is brought and shall also make such further report relative to such shipments as the Commissioner of Agriculture may from time to time require. All custom house brokers bringing into or causing to be brought into this state any nursery stock, shall file with the Commissioner of Agriculture, on or before October first each year, the name of the person, firm, association or corporation engaged in or intending to engage in such business, together with the business address of such person, firm, association or corporation. (Blanks will be furnished for this purpose.)

To Dealers in Nursery Stock

All dealers in nursery stock must, if they have no growing nursery stock in this state,

NEW YORK

file with the Commissioner of Agriculture their name and address, together with a list of all persons, firms or corporations of whom they buy nursery stock. No stock shall be sold, shipped or delivered unless accompanied by a copy of a certificate signed by the Commissioner of Agriculture or his authorized representative, indicating freedom from insect pests and fungous diseases. When all such stock is collected an inspection will be made and proper certificates provided by this department to permit shipping.

To Nurserymen

All growing nursery stock in the state will be inspected annually or oftener if necessary; and if found free from injurious insect or fungous pests there will be issued to the owner a certificate of inspection, which certificate will expire September 1, 1917.

Every car, box, bundle or package must have attached a copy including date of issue and date of expiration of said certificate of inspection before shipment or delivery.

All nursery stock found growing within one-half mile of areas infested with San Jose scale must be properly fumigated as required by the regulations of this department before shipment or delivery.

Any nursery stock received from points within the state of New York must not be sold or delivered unless it bears a valid certificate of inspection on arrival.

Any nursery stock brought into the state must remain packed or unopened until permission is given by the Commissioner of Agriculture or his duly authorized representative. To facilitate rapid inspection receivers of nursery stock should notify the department office at Albany or an authorized inspector of the receipt or expected receipt of such consignment, giving the name and address of consignor and dates.

No nursery stock shall be shipped or delivered unless there is positive evidence that it has been inspected and certified by authority of the Commissioner of Agriculture.

Labeling of Trees.

Chapter 367 of the Laws of 1914 provides for a proper and accurate labeling of trees; it extends the period during which an action may be brought to recover damages by reason to believe that his trees are not true to name. It provides that any contract which is intended to limit the liability of the nurseryman shall be in writing, and if not in writing the burden of proof shall be on the nurseryman. It provides that the purchaser may ascertain, if he desires, the locality in which the trees were propagated and grown, and the age of the trees when delivered to him; it provides that the purchaser must notify the nurseryman promptly if he finds any error has been made in filling his order. It provides that a nur-

NEW YORK

sery agent must carry a certificate of agency from his employer, and that agent must leave with the purchaser a copy of the contract covering the sale.

Information

The state is divided into districts and the nurseries are under the constant care of inspectors of the department. During the shipping season it is the duty of the department to cause an inspection of all nursery stock from points outside the state. All trees infested with San Jose scale or other injurious insects, and all trees and plants infected with fungous diseases, crown gall or galls on the roots, must be destroyed or returned to the shippers.

The Commissioner of Agriculture exempts from fumigation all herbaceous plants, conifers, greenhouse plants, flowers and cuttings, but this does not refer to stock that may distribute injurious pests. Certificates issued by this department will be valid until September 1, 1914. No certificate will be granted on a final inspection made earlier than August 1, 1913, and the most important inspection work will be done after August 1, and continue throughout the year wherever it is found necessary.

Vineyardists who make a business of selling cuttings, and small fruit growers, who do no general nursery business, will receive a special certificate of inspection. Transportation companies class cuttings as nursery stock and require copies of inspection certificates.

Duplicate certificates of inspection will be furnished by the department for filing in the offices of the states requiring them, as follows: Alabama, Florida, Georgia, Illinois, Iowa, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, North Carolina, North Dakota, Oklahoma, South Carolina, Tennessee, Texas, Virginia, Wisconsin and Wyoming. To avoid delay and possible loss of stock, no nurseryman should ship to another state, without first having learned the requirements of that state. George G. Atwood, Chief Bureau of Nursery Inspection, Albany, N. Y.

Explanation of Figures.

- (1) Actual growers of general nursery stock.
- (2) Those who retail in connection with actual growers.
- (3) Vineyardists, grape cuttings only.
- (4) Specialists who grow only peach trees or currants or some other specialty.
- (5) Dealers only.

OKLAHOMA.

The following is a copy of surety bond to be used by nurserymen outside the state of Oklahoma who desire to dispose of nursery stock in the state of Oklahoma:

In accordance with Section 17, Senate Bill 342, Oklahoma Session Laws of 1914-15, this surety bond guarantees to the state of Oklahoma that the nursery represented will not dispose of nursery stock of an inferior grade, or nursery stock that is untrue to name, or nursery stock infested or infected with insects or diseases that are considered to be injurious by the Oklahoma State Board of Agriculture. Furthermore, the nursery represented in this bond guarantees by this bond to strictly comply with the law established by the state of Oklahoma and the rules and regulations promulgated in compliance therewith, by the Oklahoma State Board of Agriculture.

In the new regulations governing the nursery business in this state, which the State Agricultural Board will probably adopt at its next monthly meeting, there will be a provision whereby certificates for the agents of the nurseries will be certified to the employer, such certificate to terminate whenever the agent discontinues work for that employer. the certificate of the state to be held by the nurseryman during the agent's employment.

OREGON.

OREGON. The State Board of Horticulture has charge of inspection within the state. All nursery stock brought into the state must be inspected before delivery to consignee. If found infected or infested nursery stock must be disinfected, returned to consignor or destroyed. Peach pits, peach trees and scions and other trees on peach roots grown in or coming from districts where peach yellows, peach rosette and little peach exist. Every carload and case containing nursery stock, trees, plants, etc., must have plainly marked thereon in a conspicuous manner and place the name and address of consignor; name and address of consignee; name of country, state or territory where contents were grown and must show that it contains nursery stock, seedlings or seeds. Address State Board of Horticulture, Portland, Oregon.

PENNSYLVANIA

certificate of inspection. Shipments of nursery stock into the state must be plainly labeled on the outside with the name of the consignor and consignee and a certificate showing that the contents have been inspected. Certificates or affidavits of fumigation are required to accompany shipments from other states, and the word "fumigated" printed or stenciled on the certificate of inspection will not be accepted unless it is apparent that such word is a part of the certificate granted by a state inspection officer. Nurserymen from other states are required to file affidavits that all nursery stock of kinds subject to infestation by San Jose scale will be properly fumigated before shipment into the state. Blanks furnished upon application. Dealers in nursery stock are furnished certificates under certain restrictions. Transportation companies are required to reject all stock entering the state, unless a certificate of inspection and fumigation is attached. Dr. J. G. Sanders, Economic Zoologist; Enos B. Engle, Chief Inspector, Harrisburg, Pa.

RHODE ISLAND

RHODE ISLAND. The inspection law provides that the State Board of Agriculture shall appoint a State Entomologist whose duties it shall be to inspect nurseries and orchards and to grant an annual certificate for sale of nursery stock. All nursery stock shipped into the state must bear on each package a certificate that the contents have been inspected by an authorized inspection officer. The State Entomologist is, furthermore, authorized to inspect any nursery stock which comes into the state, even when sent in under an official certificate, if he deems it advisable, and shall order its return to the consignor if any injurious insects or plant diseases are found therein. An affidavit of fumigation is no longer accepted in lieu of official inspection. Agents who have no nursery, and who wish to sell nursery stock within the state, must apply to the State Entomologist for an agent's license and must state where they propose to purchase their stock to be sold. A. E. Stene, State Entomologist, Kingston, R. I.

SOUTH CAROLINA.

SOUTH CAROLINA. Stock coming from other states, provinces or foreign countries and consigned to points within this state must have attached to every bundle or package an interstate tag or permit issued by the South Carolina Crop Pest Commission. This interstate tag or permit can be issued only after the certificate of inspection of the state, county or province where shipment originated has been approved by the South Carolina State Crop Pest Commission and filed in the office of the entomologist or pathologist of the said commission. It is further required that the fumigation certificate of the South Carolina State Crop Pest Commission is properly filled out and filed in the office of the entomologist or pathologist of the commission before the interstate tag or permit can be issued, unless the official inspection certificate includes a statement that the nursery is properly equipped for fumigating. Prof. A. F. Conradi, State Entomologist, Prof. H. W. Barre, State Pathologist, Clemson College, S. C.

TENNESSEE. Nurseries are inspected annually or oftener if necessary. Any person, firm or corporation without the state, desiring to do business within the state, shall file with the state entomologist and plant pathologist a copy of his certificate of inspection issued and signed by proper official of his state, as well as an agreement to fumigate properly all stock shipped into the state. Every shipment must be accompanied by a copy of said certificate of inspection and a fumigation tag. Every individual sale or bill of trees shall bear a copy of certificate. Failure to comply with the requirements subject stock to confiscation. Prof. G. M. Bentley, State Entomologist and Plant Pathologist, Knoxville, Tenn.

TEXAS

TEXAS. Nurseries and greenhouses are inspected annually. All shipments of nursery stock originating outside the state must bear shipping tags showing copy of certificate of inspection from the state inspector of the state in which the shipment originates, but in addition thereto they must have a tag attached showing copy of permit from Texas. No nursery stock shall be shipped into the state without first filing with the commissioner of agriculture a certified copy of a certificate of inspection from the state inspector of the state in which the shipment originates. A fee of \$5 is required for issuance of permit to ship into the state. Agents or dealers operating in Texas for nurserymen outside of the state must procure agents, credentials from their nurseries, on an approved form. Sam. H. Dixon, Chief Inspector, Houston, Texas.

WASHINGTON. No person shall sell or distribute nursery stock or solicit for sale without first obtaining a license to conduct business in the state. All licenses run for one year from the date of issue. The license fee shall be \$5 per annum for nurserymen and tree dealers, and \$1 per annum for agents. Each licensed nurseryman and tree dealer must execute a bond in the sum of \$1,000; the bond requires a compliance with the state laws and also that all nursery stock covered by such license shall be true to name and variety. The state is divided into horticultural districts and a supervisor is in charge of each district. All shippers of nursery stock into the state must give notice of their intention to ship and a copy of such notice shall be mailed to the district horticultural inspector. T. O. Morrison, Assistant Commissioner Agriculture, Division of Horticulture, Olympia, Wash.

WYOMING.

WYOMING. Any person or firm wishing to do business in this state must first obtain a license. Licenses are issued on application for a period terminating on July 1 of the next succeeding inspection year (approximately two years.) All applications must be accompanied by the license for (\$25.00), and by a certified certificate of inspection from an authorized inspector in the state from which shipments are to be made. On receipt of these, the secretary of the state board issues authorized shipping tags, at cost. Nursery stock may not enter the state and transportation companies may not deliver unless such tag be attached to each and every box, bundle or bale. Before making shipments, secure copy of the law from the Secretary of the State Board of Horticulture, Professor Aven Nelson, Laramie, Wyo.

CANADIAN NURSERYMEN.

CANADA. No nursery stock shall be imported that is infested with any of the following insect pests or diseases: San Jose scale, brown-tail moth, gipsy moth, woolly aphid, West Indian peach scale, potato canker, gooseberry mildew, internal and external parasitic diseases, of potato, branch canker, and blister rust of white pine. Nursery stock shall be imported only through the ports and during the periods mentioned: Vancouver, B. C. from October 1 to May 1; Niagara Falls, Ont., from October 1 to May 15; Winnipeg, Man., and St. John, N. B., from March 15 to May 15, and from October 7 to December 7; Windsor, Ont.; and St. Johns, Que., from March 15 to May 15, and from September 25 to December 7.

The port by which it is intended that the that the nursery stock shall enter shall be clearly stated on each package and notice of shipment must be sent to the Dominion

CANADA

Entomologist, Ottawa. European nursery stock and certain other classes of vegetation may in the case of certain ports be allowed to proceed and shall be inspected at point of destination, but must not be unpacked except in the presence of the inspector. Copies of the regulations governing the importation of nursery stock into Canada may be obtained from Dr. C. Gordon Hewitt, Dominion Entomologist, Ottawa, Canada, to whom all inquiries should be addressed.

Importation of coniferous trees from Maine, Massachusetts, New Hampshire, Connecticut and Rhode Island is prohibited.

The importation of chestnut trees and all fine-leaved pines into Canada from the United States is prohibited.

Importation of all nursery stock, including trees, shrubs, plants, vines, grafts, scions, cuttings or buds, through the mails is prohibited excepting greenhouse-grown plants, cut flowers, herbaceous perennials and bedding plants which will be admitted, provided that a detailed statement is attached to such parcels. This regulation to take effect March 1, 1914.
